Summary

Experienced software engineer with a strong background in designing, developing, and implementing innovative solutions for major technology companies. Proven track record in leading teams to deliver high-impact projects spanning developer tools, AI-assisted platforms, and testing infrastructure. Skilled at driving adoption through technical evangelism and cross-functional collaboration.

Professional Experience

Google

Jun 2019 - Current

Staff Engineer

- Led the observability and evaluation initiative for Google's AI-assisted code migration platform, a hosted solution enabling 100+ teams across the company to execute large-scale code transformations. Platform generated 100K+ changelists in the past year; built the critical evaluation infrastructure ensuring migration quality at scale.
- Defined the technical strategy for configuration safety, leading a cross-functional work group that streamlined configuration changes across Google. Developed a validation framework now protecting 1M+ configurations company-wide, preventing production incidents daily.
- Developed a novel approach to configuration testing, presented at the SPLASH 2023 conference. Advocated for elevating configuration to a first-class citizen among programming languages.
- Consolidated multiple testing frameworks into a single, extensible tool without compromising functionality or coverage. Drove integration with all internal frameworks, achieving company-wide adoption.
- Led a team in developing tools for configuration analysis and testing, mentoring engineers and establishing best practices for the domain.

Apple

Jun 2014 - May 2019

Senior Software Engineer

- Led the design and delivery of a localization management tool for iTunes, enhancing the platform's global reach.
- Directed the development of a synthetic iTunes client, generating realistic traffic and comprehensive tests for the platform.
- Implemented critical features for iTunes commerce, including the App Store on Apple TV, driving revenue growth and user engagement.

Thinkorswim

Jan 2011 - Jun 2014

Senior Software Engineer

- Designed and developed the thinkscript compiler and its supporting infrastructure, empowering users with advanced trading capabilities.
- Created a robust test suite for the thinkscript compiler, improving team productivity and code quality.

Deutsche Bank

Jun 2008 - Dec 2010

Senior Software Engineer

- Served as a senior Java developer and architect for the AutobahnFI (Fixed Income) project.
- Developed multiple products, including a scalable order matching engine, enhancing the platform's capabilities and reliability.

Yandex

Jul 2007 - Jun 2008

Java Software Engineer

- Contributed to the development of an internal instance of Atlassian JIRA, implementing core patches and developing various plugins.
- Optimized JIRA's performance and integrated it with internal services, improving overall efficiency and user experience.

Vita-plus

Jan 2005 - Jul 2007

Software Engineer

- Developed software solutions for a regional drugstore chain, streamlining operations and enhancing customer satisfaction.
